# Tikkurila ColorReader

A FAST, ACCURATE, AND EASY  
WAY TO MEASURE COLORS AND  
CREATE COLOR PALETTES

# Be confident with color

Tikkurila ColorReader is a powerful, easy-to-use measurement and lookup tool developed for color professionals including painters, architects, and designers. It helps you to accurately measure any color, then find the closest paint matches in a fan deck collection stored either on the unit itself and/or on a mobile app. This makes it easier to choose the right paint color first time.

ColorReader is ultraportable and can identify the exact color of everyday objects and map it to Tikkurila color cards, NCS®, RAL®, and other color collections. Once you have identified a color, ColorReader makes it easy to create and share color palettes, helping you bring your design vision to life.

In addition to the ColorReader device, you'll need to download a mobile app that stores the color fan decks. The app makes it easy to store, recall, and examine color information for your project in real time.

ColorReader is available in both Standard and PRO versions: the standard version is smaller in size whereas ColorReaderPRO has an embedded OLED screen that means it can be used with or without the mobile app. When you measure a color in standalone mode on ColorReaderPRO, the screen displays the color codes of the closest matches.

## HOW TO USE THE MOBILE APPLICATION

Simply place the Tikkurila ColorReader over the sample to be measured and press 'Read' on the app screen or the button on the ColorReaderPRO. The app will immediately display the closest matches stored in its fan deck database. If you're using ColorReaderPRO, the three closest matches will also automatically display on the device.

To download the mobile app and user guides, please visit [www.datacolor.com/getcolorreader](http://www.datacolor.com/getcolorreader)

## COLOR FAN DECKS:

- TIKKURILA SYMPHONY, OPUS 1
