

All Valtti wood oils are suitable for impregnated wood, hardwood, and thermally modified and untreated wood, as well as wood that has been industrially oiled or previously treated with oil.

Application

General

- Wash the old, darkened wood surface with Tehopesu (Super Clean) in accordance with the instructions on the label, and allow to dry.
- Stir the wood oil thoroughly before use and occasionally during use.
- Spread the wood oil with a decking oil spatula, brush, or sponge, pressing the tool down tightly so that all the oil is absorbed into the wood. Wipe off any excess oil.

Every year, check the condition of the surfaces treated with oil. If necessary, apply a maintenance treatment when the surface looks dry and faded. Open deck surfaces may require a maintenance treatment every 1-4 years, depending on the product used.

Use tinted wood oil, because a tinted product withstands weathering better than a colorless product. The type and condition of wood affect the final color. Test the product on a small area first.
