KILPI KATONPUHDISTAJA

TECHNICAL DATA

Coverage	4-7 m ² /l ready-to-use solution.
Can sizes	5 l
Thinner	Water Heavy growth: 1 part cleaning agent, 2 parts water. Maintenance and slight growth: 1 part cleaning agent, 4 parts water.
Application method	Spraying (low-pressure spray), brushing
Density (kg/l)	Approx. 1.0 kg/l, ISO 2811
Storage	Protect from frost.

KILPI KATONPUHDISTAJA

APPLICATION INSTRUCTIONS

Surface preparation

Clean the roof by removing leaves, debris and loose vegetation e.g. by brushing. Protect plants from possible splashes.

Application

When the surface is not supposed to be painted:

Apply the diluted Kilpi Katonpuhdistaja (roof cleaner) to a dry, cleaned surface from bottom to top by using a knapsack spray, for example. Do not rinse the product off; instead, leave it to work on the roof.

Surface to be painted:

Apply the diluted Kilpi Katonpuhdistaja (roof cleaner) to a dry, cleaned surface from bottom to top by using a knapsack spray, for example. The product is not flushed off, but left on the roof to take effect for a few days, preferably even for a week. Leaving the product to work for longer is more effective for cleaning the roof.

The treatment may be renewed if there is a lot of vegetation.

The roof is washed with a pressure spray and let dry before painting. Avoid damaging the substrate and related structures with excessive pressure during washing.

Note

It may take several months until the roof becomes clean.

The roof surface must be dry, so that the treatment agent is absorbed and can affect the growth.

Avoid applying the treatment in sunny weather, to prevent the active substance from evaporating too soon.

Avoid spilling the substance into the ground or water during use. Avoid using when there is a great risk of rain.

Allow the Kilpi Katonpuhdistaja (roof cleaner) to work for 24 hours before rain.

The rain water off the roof after the first rains should not be used for watering plants or for washing.
